Art Unit: 3714

DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the passageway formed between the plurality of concurrently existing tracks must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Interpretation Note

2. Applicant has amended the claims to replace "field regions" with "tracks". Examiner has not found the word "tracks" in Applicant's disclosure. Examiner believes these "tracks" are the "courses" described on pages 6 and 7 of the specification. Furthermore, in view of Applicant's arguments, Examiner believes that by "tracks", Applicant means, "independent tracks" – i.e., a dirt track and a turf track. While this interpretation is not required by the specification, this is the interpretation that Examiner will place on the term.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 3714

4. Claims 1-6, 8-13, 15-20 & 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fongeallaz in view of Filiczkowski (US Patent Number 5,106,098).

Claims 1, 8, 15: Fongeallaz teaches a computerized game system with a racing field formed on a predetermined board (Fig 13) that is electronically displayed on a screen. There is a running model to which an inherent ability parameter varying in accordance with a given environment is assigned. (Col 5, 41-45) The racing field (Fig 13) comprises a plurality of tracks (L1-L16) in which the running model runs based on a current ability parameter in accordance with the respective track. (Col 5, 40-56) These tracks clearly exist concurrently on the same game board. (Fig 13) Fongeallaz does not specifically teach independent tracks. Filiczkowski teaches independent tracks (abstract), i.e., a dirt track and a turf track (Fig 1B). Filiczkowski teaches that this allows the invention to closely simulate actual horse race track action. (Abstract) It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Fongeallaz track in view of Filiczkowski's teachings to include independent tracks (i.e., a dirt track and a turf track) in order to simulate actual horse track action.

Claims 2, 3, 9, 10, 16, 17: Fongeallaz teaches the invention substantially as claimed. Fongeallaz teaches use of a track with regions having different attributes. (Col 5, 40-62) For instance, Fongeallaz suggests use of dry track and mud track attributes. (Col 5, 43-45) Fongeallaz describes a steeplechase game in which there are flat regions where the running model performs steady running in which the current ability parameter is maximized and in other regions there is a region formed so as to obstruct the steady running (obstacles). (Col 5, 63-66) Fongeallaz fails to explicitly teach entire tracks

Art Unit: 3714

where the current ability parameter of the running model is maximized or minimized. Filiczkowski teaches a dirt track and a turf track (Fig 1B) where the current ability parameter of the running model is maximized or minimized. Filiczkowski teaches that this allows the invention to closely simulate actual horse race track action. (Abstract) It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Fongeallaz track in view of Filiczkowski's teachings to include a dirt track and a turf track where the current ability parameter of the running model is maximized or minimized in order to simulate actual horse track action.

Claims 5, 12, 19: Filiczkowski teaches that the running models can run races on both tracks. (Abstract) The starting posts are essentially passageways formed between the plurality of concurrently existing tracks so that the running models can enter the tracks. The finish lines are essentially passageways formed between the plurality of concurrently existing tracks so that the running models can exit the tracks.

Claims 6, 13, 20: Fongeallaz teaches the plurality of tracks form concentric racing courses. (Col 4, 36-43) Filiczkowski's Fig 1 B shows the plurality of tracks form concentric racing courses.

Claims 4, 11, 18, 22: Fongeallaz teaches the invention substantially as claimed.

Fongeallaz teaches use of a track with regions having different attributes. (Col 5, 40-62)

For instance, Fongeallaz suggests use of dry track and mud track attributes. (Col 5, 43-45) While Fongeallaz does not specifically teach dirt and turf track sections, these are the two main types of tracks used in horseracing. Filiczkowski teaches a dirt track and a turf track. Filiczkowski teaches that this allows the invention to closely simulate actual horse

Art Unit: 3714

race track action. (Abstract) It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Fongeallaz track in view of Filiczkowski's teachings to include a dirt track and a turf track in order to simulate actual horse track action.

5. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fongeallaz and Filiczkowski as applied to claim 22 above, and further in view of Ikeda et al. (US Patent Number 6,371,854).

Claims 23: Fongeallaz and Filiczkowski teach the invention substantially as claimed. Fongeallaz teaches storing a "library" of data concerning the attributes and abilities of each running model. (Col 5, 50-62) Fongeallaz does not, however, specifically teach adding a game value to the "library" in accordance with the result of the race. Ikeda, a game in the same art, teaches allowing players to raise and train their own horses (running models). This training includes running races and recording the result of the race in the horse's library of information. Allowing players to raise and train their own horse gives the player a greater sense of involvement in the game. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the Fongeallaz's library by add a game value to the horse's "library" of attributes in accordance with the result of the race as taught by Ikeda in order to allow the player to raise and train the horse, thus giving the player a greater sense of involvement in the game.

Art Unit: 3714

Response to Arguments

6. Applicant's arguments with respect to claims 1-6, 8-13, 15-20, 22 & 23 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Corbett B. Coburn whose telephone number is (703) 305-3319. The examiner can normally be reached on 8-5:30, Monday-Friday, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Hughes can be reached on (703) 308-1806. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9302 for regular communications and (703) 872-9303 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1148.
